Undergrad	694K	493K	-28.99%

Warren has seen positive growth numbers in all higher education numbers across 10 years, while its population not graduating high school dropped over the same period. This trend carries over to the county level and most dramatically to the state level, where the population not graduating high school dropped over 24%.

However, a less encouraging development is unveiled looking at current education numbers. Across 10 years, elementary, middle, and high school numbers are relatively consistent in Warren, as are high school numbers at the county level. But Macomb County has lost around 10% of both elementary and middle school aged students, with a similar story at the state level to also include high school. Perhaps most telling, though, are undergraduate numbers: down 29% in the state, 37% in the county, and almost 52% in Warren.
